

Service, repair and calibration of tooling

We can calibrate and repair your JST hand tools and our experienced application tooling engineers can service and repair your JST application tooling, either at our UK factory, or on site at your premises.

Spare parts for your application tooling

JST UK has a comprehensive inventory of spare parts for your JST application tooling. Just give us a call and we can ensure that your equipment is up and running again with the minimum delay.

Do you have the correct tooling?

Using JST application tooling together with your JST connectors, you can be assured that the finished product will perform according to specification.

All performance verification tests are carried out using dedicated JST tooling, ensuring that the results achieved in our laboratory are repeated in your production.

If you use JST application tooling, you can be sure of a quality connection.

Do you need harness samples or small batches?

JST can provide you with a wide variety of ready-made low volume harnesses in both crimp and IDC format. This is the ideal solution if you need small batches quickly or if investment in the appropriate application tooling cannot be justified by harness volumes.

Ideal for prototype and small batch requirements.
